Subject index

accreditation; international perspective on programmes for hospital 129
ACHS *see* Australian Council on Healthcare Standards
acute hospitals *see* hospitals, acute
admissions; quality improvement to increase number of day-only 111
adolescent patients; paediatric hospital services and satisfaction of 161
appendicectomy, paediatric; analysis of surgical practice in relation to 29, (Comment) 235, (Reply) 236
audit
  for continuing quality improvement of management of paediatric intussusception 23
  history and methods of surgical 81
  in rural health, mystery shopping as a tool for 203
  limited adverse occurrence screening for medical 221
  of accurate use of sphygmomanometers in hospitals 17
  of patient satisfaction in the United Kingdom 67
  of patients admitted to rural hospital with myocardial infarction 99
  of referral letters in general practice for quality assessment 45
  to identify target for continuous quality improvement in day wards 177
audit, surgical
  assessment of patient satisfaction with 67
  history of 81
  in paediatric appendicectomy 29, (Comment) 235, (Reply) 236
  in private practice to improve patient outcome 159
Australian Council on Healthcare Standards
  accreditation survey on pulmonary embolism by 75
  and quality assurance 59
  standard of hospital accreditation programmes of 129
Australian Medical Association; and quality assurance 59

best practice
  and enterprise bargaining in healthcare 195
  in the health sector 133
blood pressure measurement; audit of correct use of sphygmomanometers in hospitals 17
book reviews 57, 127

cancer, cervical; screening programmes and use of new technology to detect 139
clinical indicators
  development of, for physiotherapy management of lower back pain 51
  for ensuring quality of day wards 177
  in emergency readmission 211
  medication prescription errors as 183
  postoperative pulmonary embolism as 75
clinical testing; and quality in pathology laboratory practice 121
continuous monitoring; to ensure quality management of pulmonary embolism 75
continuous quality improvement (CQI)
  and clinical indicators in day wards 177
  in anatomical pathology department 105
  of management of paediatric intussusception 23
customer focus; as requirement of quality service delivery 3
cytology; techniques to improve reliability of routine cervical 139

data collection
  as a tool for resource allocation in acute hospitals 11
  for total quality management of booking processes in rural hospitals 37
day-only patients
  clinical indicators and continuous quality improvement in 177
  quality improvement to increase number of admissions of 111

Diabetes Control and Complication Trial (DCCT); comparison of results between insulin-dependent diabetes mellitus patients and 89
diagnosis related groups; resource allocation using data analysis of 11
drug prescription; errors in, as clinical indicator in hospitals 183

editorial 1, 120, 193
emergency readmission; validation of ACHS 28 day interval for 211
enterprise bargaining; and best practice in healthcare 195

general practice; audit of referral letters for quality assessment in 45

healthcare
  best practice and enterprise bargaining in 195
  delivery; quality assurance to ensure best practice in 133
  limited adverse occurrence screening and quality assurance in 221
hospital accreditation programmes; international perspectives of 129
hospitals
  correct use of sphygmomanometers in 17
  medication prescription errors as clinical indicator in 183
  postoperative pulmonary embolism as clinical indicator in different types of 75
  satisfaction of adolescent patients with paediatric services in 161
  total quality management in anatomical pathology departments of major 105
hospitals, acute;
  morbidity data and resource allocation in 11
  readmission rate and quality management in 211
hospitals, rural;
  methodology for assessing staff morale in 3
  outcome of myocardial infarction in 99
  quality improvement to increase number of day-only admissions in 111
  staff training and improvement of customer services in 169
  total quality management of booking processes in 37
hypertension; correct use of sphygmomanometers in hospitals to detect 17
hypoglycaemia; control of, in patients with insulin-dependent diabetes mellitus 89

IDDM *see* insulin-dependent diabetes mellitus
inpatient services; satisfaction of adolescent patients with paediatric 161
insulin-dependent diabetes mellitus; diabetic control and hypoglycaemia in patients with 89
intussusception, paediatric; continuing quality improvement of management of 23

medication; prescription errors as clinical indicator in hospitals 183
morale
  as indicator of quality management success 3
  staff training and improvement in staff 169
myocardial infarction; outcome of, in rural hospitals 99

notices 191, 239
nursing; and management of booking processes in rural hospitals 37

outcome
  as a tool in quality management in healthcare 211
  limited adverse occurrence screening and patient 221
  of patients with myocardial infarction treated in rural hospital 99

paediatrics
  continuing quality improvement of management of intussusception in 23
  patterns of appendicectomy and surgical practice in 29, (Comment) 235, (Reply) 236

satisfaction of adolescent patients with hospital 161
pain; lower back, developing clinical indicators for physiotherapy management of 51
Pap smear test; limitations of screening for cervical cancer using 139
pathology laboratory
quality assurance in 121
total quality management for 105
patient satisfaction
audit service for 67
improvement of, following staff training 169
mystery shopping used to improve quality of healthcare and 203
paediatric hospital services adolescent 161
physiotherapy; and clinical indicators used in management of lower back pain 51
postoperative pulmonary embolism; assessment of, as measure of patient care 75
prescription; errors, as clinical indicator in hospitals 183
private practice; surgical audit in, to improve patient outcome 159
pulmonary embolism, postoperative; assessment of, as measure of patient care 75

quality assurance
and best practice in the health sector 133
and The International Society for Quality in Health Care 59
history of surgical audit and 81
improving outcome and decreasing expenditure through 147
in general practice, referral letters to measure 45
in pathology laboratory practice 121
in private practice, surgical audit to promote 159
in anatomical pathology department 105
limited adverse occurrence screening for effective 221
mystery shopping as a tool for 203
quality care; and development of clinical indicators for physiotherapists 51
quality improvement
clinical indicators for ensuring 177
of management of paediatric intussusception 23
quantitative approach to resource allocation and 11
to increase number of day-only admissions 111
quality management; and staff morale 3

readmission rates; validation of ACHS 28 day interval for assessment of emergency 211
referral letters; as a tool for quality assessment in general practice 45
resource allocation; morbidity data in acute hospitals as a tool for 11
risk factors; total quality management at The Royal Victorian Eye and Ear Hospital to reduce 147
rural health; mystery shopping as a method to improve quality in 203
rural hospitals *see* hospitals, rural

screening
for cervical cancer, improvement of techniques used in 139
quality control using limited adverse occurrence 221
sphygmomanometers; audit of accurate use in hospitals 17
staff surveys; for assessment of morale 3
staff training; and improvement of customer services in rural health 169
standards
of referral letters and quality assessment in general practice 45
maintenance of, and increased throughput of day-only admissions 111
surgery, day-only; clinical indicators and continuous quality improvement in 177
surgical audit *see* audit, surgical
surgical practice; and analysis of patterns of paediatric appendicectomy 29, (Comment) 235, (Reply) 236

technology; improving routine cervical cytology using new 139
The International Society for Quality in Health Care; in Australia 59
The Royal College of Surgeons; patient satisfaction auditing by 67
The Royal Victorian Eye and Ear Hospital; total quality management at 147
total quality management (TQM)
in anatomical pathology department 105
improving outcome and decreasing expenditure through 147
of booking processes in rural hospitals 37
